

C3 Reservations SIMPLIFIES and STREAMLINES dock scheduling

C3 Reservations is a complete web-based dock scheduling system that provides a simple, powerful and intuitive appointment scheduling interface for you, and self-service appointment booking capability for suppliers/carriers. C3 Reservations allows distribution centre operators to optimize inbound and outbound traffic for increased speed and efficiency while improving flexibility and reducing the amount of time spent dealing with vendor requests.

SCHEDULE ACCORDING TO REAL CAPACITY

C3 Reservations allows you to optimize inbound and outbound dock reservations according to actual operational capacity. By setting constraints on variables such as staffing levels, specific suppliers and volume restrictions, you can create a snapshot of your capacity to help guide your decision-making.

SMOOTH OUT PEAK PERIODS

The scheduling system makes it possible to effectively shape workload for maximum efficiency and to make quick adjustments to accommodate peak loads or new priorities. The graphical scheduling interface helps you to understand what the day will look like and to examine different scenarios before approving appointments.

FLEXIBILITY EQUALS UTILITY

C3 Reservations offers you the flexibility to customize performance to meet your unique business needs. Scalable automation means that you can configure the system to reflect your business processes, including varying complexity or the need for manual intervention.

The system can also be used to schedule carrier pick-ups from a manufacturing plant or to accept inventory into the warehouse. It can operate in a complete stand-alone mode, or can be seamlessly integrated with C3's Yard Smart yard management system (YMS) and other supply chain systems.

TRACK KPIs IN REAL TIME

C3 Reservations generates real-time Key Performance Indicator reports that allow management to understand the current workload, diagnose performance issues and track changes in performance over time. The system also provides visibility on your carrier's performance, giving you an effective supplier/carrier-compliance reporting tool.

PRICED RIGHT FOR YOUR BUSINESS

With its transactional pricing model and web hosted offering, C3 Reservations represents a radically lower cost solution compared to other products on the market. Transactional pricing means you pay for a solution that fits the size of your operation – not the size of the software.

BENEFITS OF C3 RESERVATIONS

The C3 Reservations web-based dock scheduling system allows vendors to book and logistics managers to optimize the incoming and outgoing flow in one or many distribution centers. C3 Reservations helps:

Increase the productivity of the reservations desk:

- Centralize the dock scheduling process to one central group rather than individuals at each Distribution Centre
- Reduce or even eliminate time-consuming phone calls between scheduling department and vendors/carriers
- Eliminate unnecessary email/faxing and schedule status requests from vendors and buyers
- Provide enterprise-wide visibility of schedules and status of inbound and outbound shipments

Increase availability of inventory through decreased turn-around times:

- Increase inbound and outbound efficiency by reducing the time to make and alter dock reservations
- Prioritize shipments that are the most important to your business

Increase dock efficiency:

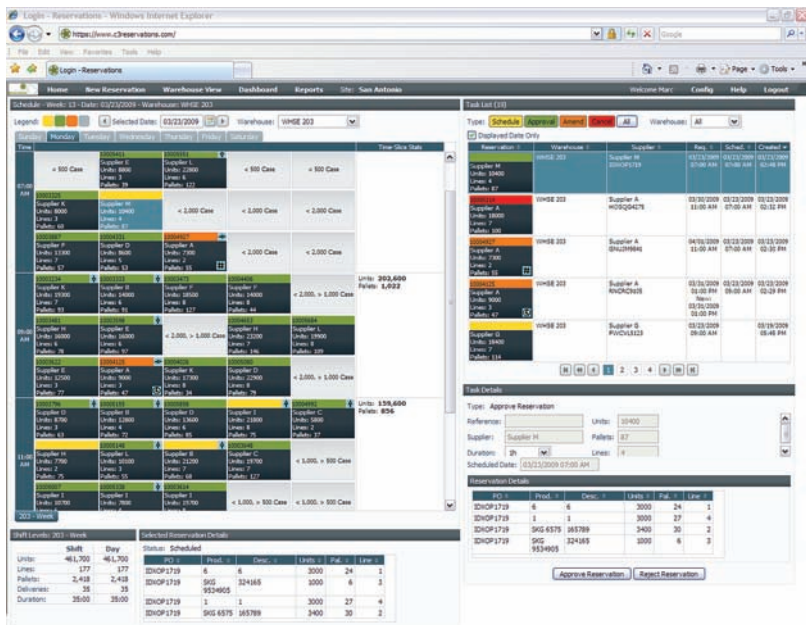

- Balance workload throughout the day
- Ensure high-demand products are handled as a priority

POWERFUL FUNCTIONALITY IN A STAND-ALONE PACKAGE

C3 Reservations is a breakthrough, stand-alone dock appointment scheduling system that will turn your warehouse scheduling challenges into supply chain opportunities. C3's unique approach allows each customer to model business processes with a level of automation that is manageable and realistic. The C3 Reservations web-based system allows for easy deployment and intuitive usage for both vendors and internal office staff.

BUSINESS VIEW

DASHBOARD

FEATURES

- Rich internet application (RIA) providing desktop like functionality through a browser for all aspects of the system.
- Specialized RIA interface for schedulers, warehouse and gate personnel
- Easy-to-use wizard-based interface guides suppliers/carriers through the reservation request process without training
- Extensive constraint model enabling the business to control volumes, special equipment requirements, standing appoints etc.
- True enterprise system allowing centralized management of multiple sites and multiple warehouses with unique configurations and sets of constraints
- Real time KPI monitoring with a graphical dashboard
- Easy-to-manage supplier/carrier web access with role-based security
- Printable, bar-coded gate passes to expedite gate arrival
- Powerful easy to implement integration to any supply chain system through Web Services, XML and EDI
- Comprehensive reporting capabilities that allow for monitoring of all system metrics and KPIs.
